EQUIPMENT AND SERVICES

LH GROUP
SERVICES

Independent supplier of specialist plant vehicle services

Established in 1953, to provide product overhaul and support services for the UK 'Off Highway' industry, LH Group Services has since expanded to become the largest independent supplier of re-manufactured power-train products in the UK.

All Machinery - all makes

Being truly an independent operation, the company is able to supply overhaul and repair services for any type of 'Off Highway' machinery or equipment. Not being subject to OEM constraints, LH Group Services can provide you with complete product support, including on-site service and maintenance.

Re-manufactured, engines, transmissions and final drives

Whatever your power-train requirements, LH Group Services are there to help. The company holds an extensive stock of fully refurbished units, ready for next day delivery. However, should you choose otherwise, you can also opt to have your own unit overhauled. In such cases, we will collect, overhaul and return your unit as quickly as possible in order to keep your machine down-time to an absolute minimum.

Complete machine overhaul

With over 50 years of engineering experience, no overhaul project is too large or indeed too small. LH Group Services provides complete vehicle refurbishment programmes on machines from all over the world.

Our specialist 'Off Highway' work force are skilled in every aspect of machine maintenance and repair. Control of each overhaul project is always kept within the company without the need for external sub-contractors. This includes electrics, chassis, hydraulics, fabrication, complete power-train systems and finished livery painting.

Service and Maintenance

As part of our commitment to providing the best possible service in the industry, LH Group Services employ a network of site/service engineers who are strategically located throughout the UK. Fully equipped and industry qualified to provide repair and diagnostic services, our engineers will rapidly respond to your call for assistance in order to assist in having your machine back in working order as soon as possible.

Quality and testing

Before delivery, every unit is subject to an extensive testing procedure, in accordance with the original equipment manufacturers specifications and guidelines. All workshop operations adhere to strict overhaul procedures set by our in-house quality department, all of which conform to or exceed industry recognised quality accreditation BS EN:ISO9001:2000.
